CLAIMS

Please amend the claims as follows:

- (Currently Amended) A symbol-bearing receptacle for a fluid, said receptacle comprising:
 - a container for said fluid: and
 - a transparent symbol disposed on said container, said symbol having a water reactivity that differs from water reactivity of said container.
 - wherein the difference in water reactivities renders said symbol visually distinct from said container when said container holds said fluid and when a temperature of said container is reduced to a condensation point.
- (Original) The symbol-bearing receptacle of claim 1, wherein said symbol is hydrophilic and said container is hydrophobic.
- (Original) The symbol-bearing receptacle of claim 1, wherein said symbol is hydrophobic and said container is hydrophilic.
 - 4. (Cancelled)
- (Original) The symbol-bearing receptacle of claim 1, wherein said symbol comprises a plastic film.
- (Original) The symbol-bearing receptacle of claim 1, wherein said symbol comprises a silicone film.
 - 7. (Cancelled)
- (Previously Presented) The symbol-bearing receptacle of claim 1, wherein said symbol is embedded in a surface of said container.
 - 9-20. (Cancelled)
- (Previously Presented) The symbol-bearing receptacle of claim 1, said container comprising a confined passageway disposed within a surface of the eontainer.

- 22. (Previously Presented) The symbol-bearing receptacle of claim 21, said passageway configured for holding a coolant.
 - 23-24. (Cancelled)
- (Currently Amended) A symbol-bearing receptacle for a fluid, said receptacle comprising:
 - a container for said fluid, the container comprising an open fluid receptacle formed of a base disposed upon a substrate and a wall affixed to and extending upwardly from said base; and
 - a transparent symbol disposed on said base and facing said substrate, said symbol having a water reactivity that differs from a water reactivity of said container;
 - wherein the difference in water reactivities renders said symbol visually distinct from said container when said container holds said fluid and when a temperature of said container is reduced to a condensation point.
- 26. (Currently Amended) The symbol-bearing receptacle of claim 25, said symbol comprising a pattern that develops on a surface supporting said base due to water condensation when said container holds said fluid and said temperature is reduced to said condensation point.
- (Previously Presented) The symbol-bearing receptacle of claim 25, said base comprising a material surrounding said symbol that is dissimilar to material forming said symbol.
- 28. (Previously Presented) The symbol-bearing receptacle of claim 27, wherein said material forming said symbol is hydrophilic and said material surrounding said symbol is hydrophobic.
- (Previously Presented) The symbol-bearing receptacle of claim 27, wherein said material forming said symbol is hydrophobic and said material surrounding said symbol is hydrophilic.

Atty. Docket No. 412589

30. (Previously Presented) The symbol-bearing receptacle of claim 25, further comprising a plurality of base extensions elevating said substrate from said base, wherein one or more of said base extensions form said symbol.

- (Previously Presented) The symbol-bearing receptacle of claim 25, said container further comprising a confined passageway disposed within one or both of said base and said wall.
- 32. (Previously Presented) The symbol-bearing receptacle of claim 31, said confined passageway configured for holding a coolant.
